

## The instruction of SAR object detection dataset

SAR image object detection dataset, relying on the national high-resolution Earth observation system major science and technology special application basic technology support project, construct a dataset for wide amplitude scenes, covering classical types and close to practical applications, aiming to improve the use of our country's SAR data and promote advanced research such as SAR object detection growth.

The SAR image object detection data set is owned by the Genscience and Cyberspace Information Technology Laboratory of Aerospace Information Research Institute, China Academy of Science. The editorial department of the Journal of Radar has editorial rights.

Readers can use this data for teaching, research, etc for free, but they need to be quoted or acknowledged in the papers or reports, etc. This data is forbidden for private bussiness use. For bussiness purposes, please contact the Editorial Department of the *Journal of Radar*.

For the first data download, please follow to the WeChat public account, click on the registration, and verify by email; after the data download, it can be started at the WeChat scan code. English website data download and registration can be verified directly by email.
